Project 3:

Make your own... embedded
image in a resin bangle

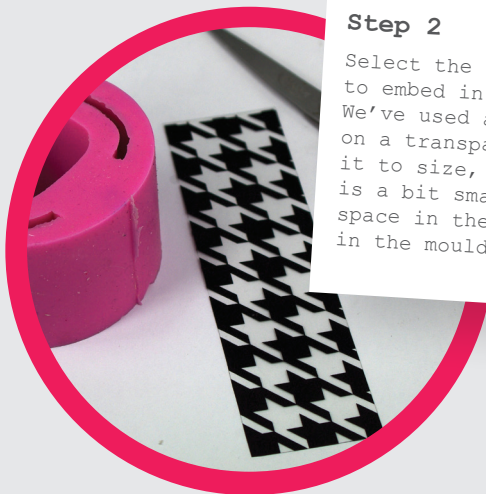

Step 1

Select the mould you'd like to use. Measure your part A and B of resin in the required volume for the mould, making sure you have even quantities.

Step 2

Select the image you'd like to embed in your bangle. We've used a pattern printed on a transparent sheet. Cut it to size, making sure it is a bit smaller than the space in the bangle. Place in the mould.

Step 3

Mix a very small amount of blue or black pigment into part A to combat the yellow colouring of the resin. Make sure you can still see through the resin!

Step 4

Mix part A and B together and pour into the mould, making sure you pour it on either side of the embedded sheet.

Step 5

Once you have finished pouring, wait 20 minutes to demould. Sand, and it's ready to wear!
