

Guide To Plasters And Gypsums

CASTING PLASTER

A general purpose casting plaster
Uses and applications: Modelling and plaster craft replications. Suitable for carving and turning.

NO.1 POTTERY PLASTER

Highly uniform with a long life
Uses and applications: Ideal for running slip latex, ceramicware, sanitaryware and dinnerware. Perfect for creating long lasting slip casting moulds

HYDROCAL 105

A gypsum with controlled expansion.
Buff in colour
Uses and applications: Ideal for dental moulds and life casting applications

WHITE HYDROCAL

White, multi-purpose gypsum, offering a gradual setting time, with a long period of elasticity
Uses and applications: Ideal for solid and hollow casting. High green strength minimises breakage during removal from moulds

ULTRACAL 30

Widely used gypsum cement with lowest expansion rate
Uses and applications: Industry standard for casting foam latex. Highest strength, without the tendency to warp. Excellent for case moulds and all applications that require exceptional hardness

HYDROSTONE TB

A Gypsum that combines high strength and hardness
Uses and applications: Ideal in case moulding and casting solid casts and statues

** Note: When using plaster/gypsum refer to mix ration on container. Always add powder into water, let settle and then mix
